# The Man From Pakistan: The True Story Of The World's Most Dangerous Nuclear Smuggler

## Synopsis

The world has entered a second nuclear age. For the first time since the end of the Cold War, the threat of nuclear annihilation is on the rise. Should such an assault occur, there is a strong likelihood that the trail of devastation will lead back to Abdul Qadeer Khan, the Pakistani father of the Islamic bomb and the mastermind behind a vast clandestine enterprise that has sold nuclear secrets to Iran, North Korea, and Libya. Khan's loose-knit organization was and still may be a nuclear Wal-Mart, selling weapons blueprints, parts, and the expertise to assemble the works into a do-it-yourself bomb kit. Amazingly, American authorities could have halted his operation, but they chose instead to watch and wait. Khan proved that the international safeguards the world relied on no longer worked. Journalists Douglas Frantz and Catherine Collins tell this alarming tale of international intrigue through the eyes of the European and American officials who suspected Khan, tracked him, and ultimately shut him down, but only after the nuclear genie was long out of the bottle.

## Book Information

Paperback: 432 pages

Publisher: Twelve; Reprint edition (November 11, 2008)

## Customer Reviews

Subtitled: The true story of the man who sold the world's most dangerous secrets and how we could have stopped him. The events begin in 1972 when Khan started working for a Dutch technology firm that designed and manufactured centrifuges used for enriching uranium. Authors Frantz and Collins describe how he contacted Pakistani diplomats and offered his services to his country. He also displayed such an insatiable curiosity about nuclear related products that some of his coworkers

eventually became concerned enough to report him. In 1975, Khan moved to Pakistan where he set about making his country a nuclear power. As Pakistan realized its nuclear ambitions, Khan accumulated wealth and power and became a national hero in 1998 when Pakistan detonated five nuclear devices underground. By then, Khan had established foreign markets for his expertise and his ability to deliver tightly controlled materials. The "Pakistani Pipeline" (an operation to procure restricted materials and provide technical expertise) had expanded its operations to newer markets. The U.S. administration ignored the nuclear threat because it needed an ally in the anti-Soviet war in Afghanistan and later in the war against terror, after 9/11. The Pakistani authorities arrested Khan in 2003. Pervez Musharraf pardoned him after a written confession and placed him under house arrest. By this time, no one knew who has nuclear capability. The book is well-written; it reads like a spy novel and its great strength is that it gives so many details that readers can see the complexity of the issue. The authors' bias that it is bad for nuclear weapons to exist at all does come through, as does their liberal slant on American politics.
