This book is excellent! It has fill in the blank documentation examples which is great for a nursing student that is just learning about documentation. If I can't find the topic in here, I move on to my Chart Smart book or my Charting made incredibly easy book. I always start with this book first. Even
I really like this book. I change from a hospital setting to long term care and this little book really help with the different type of charting.

This was recommended by my clinical instructor and I couldn't be happier that I purchased it. One of the most difficult thing I have found as a nursing student is documentation...as evidenced by...blah blah blah. This handy little flip book saved me on writing nursing notes, care plans, clinical prep sheets...the list goes on. I am certain this little book will be following me out of nursing school and into the hospital!
