Neuro-Ophthalmology (What Do I Do Now)
**Synopsis**

Neuro-ophthalmology is a field of medicine that touches on every subspecialty in neurology, but has an undeserved reputation as a branch of knowledge that is difficult to learn and practice. Many neurologists and ophthalmologists do not receive sufficient exposure to neuro-ophthalmology during their residencies, and are uncomfortable diagnosing and treating patients with neuro-ophthalmic problems. Authored by neuro-ophthalmologists whose careers span three generations in the field, Neuro-Ophthalmology helps clinicians evaluate and manage patients with neuro-ophthalmic problems. This “curb-side consult” approach is divided into five sections: afferent (visual) disorders; efferent (eye movement) disorders; eyelid disorders; pupil disorders; and combination syndromes. Based on the most current scholarly evidence and filled with practical advice, Neuro-Ophthalmology provides the answers to “what do I do now?”

**Book Information**

Series: What Do I Do Now  
Paperback: 208 pages  
Publisher: Oxford University Press; 1 edition (November 1, 2011)

**Customer Reviews**

Una manera práctica de aprender y reforzar conocimientos. Una serie muy recomendable

Best synopsis of neuro-ophthalmology I have seen great for Optometry Boards review and to have for a quick reference in the lane

Clinical case presentations introduced each chapter of the book making it interesting and precise.
Mandatory for neurologists!
